Revised 10.2014
SECONDHAND SMOKE

72% of African Americans are exposed to secondhand smoke compared to 50% of Whites and 45% of Hispanic Americans.

African Americans are disproportionately employed in labor and factory jobs (40% compared to the national average of 27.3%), which have the highest rates of exposure to secondhand smoke.

Smoking or being exposed to cigarette smoke contributes to the high rates of asthma among African Americans. Asthma affects African American children more than any other disease.

*Data from: National African American Tobacco Prevention Network

THE DANGERS OF MENTHOLATED CIGARETTES

3 out of 4 African American smokers chose mentholated (Kool, Newport, and Camel) cigarettes.

Mentholated cigarettes are the tobacco industry’s most profitable cigarette. They produce higher sales than non-mentholated cigarettes and are strategically placed in African American communities.

There is evidence that smoking mentholated cigarettes may result in higher rates of lung cancer than non-mentholated brands.

Menthol smokers may be more likely to inhale deeper with each drag on their cigarette and potentially take in more harmful chemicals.

READY TO QUIT?
QUIT HELP LINE: 1-800-QUIT-NOW

BE INFORMED
It is important to stay up-to-date on the effects your lifestyle has on your health, including tobacco use. Staying informed will help you to be better prepared when making healthy choices about your life.

SEEK CESSATION
Your campus may offer services to help you quit, including counseling or medical assistance. You can also ask your medical provider or local health department for help.

ENCourage OTHERS
It is also important to share your knowledge on health with your friends and family. Keeping others informed will help them make healthy choices, encouraging people everywhere to be the strong, healthy individuals they really are.
