Three minutes and oh-so worth it. That’s all it will take you to read this pamphlet on one of the biggest issues in college: alcohol. Just three minutes for you to learn the best tips on partying legal and lower risk.

Yes, it’s true: a majority of college students do use alcohol. However, you might be surprised to know that it’s not as much or as frequent as the perception. Nine out of 10 Missouri college students don’t use alcohol more than three times per week, and most students do not binge drink.*

How do you enjoy yourself while lowering your risk?

Read on.

Revised 10.2014
Top Ten to Consider

1. **It’s your choice to drink.**
   Not everyone drinks; it’s a personal decision. First, respect university, city and state laws regarding alcohol. Consider the legal, health, and social aspects of drinking, and then decide what is best for you. If others around you choose not to drink, respect their decisions, too.

2. **Decide ahead of time.**
   Know what your limitations are before heading out to a party. This includes expectations for drinking and sexual situations. Be honest with yourself about what makes you uncomfortable. Also, determine who will be the sober driver for the evening. Ensure that this person remains sober. The “least drunk person” is not the same as a safe driver.

3. **Know your body.**
   Males and females process alcohol differently. Females tend to be smaller; meaning there is less body mass throughout which to distribute the alcohol. There is also less body fluid in women to dilute the alcohol, and a woman’s liver produces less of an enzyme needed for breaking down alcohol. For men, alcohol can disrupt the processes the body uses to grow muscle, rest and heal. High levels of alcohol use can also cause sexual dysfunction.

4. **How are you measuring?**
   Having a “drink” is pretty vague in terms of knowing how much alcohol you have consumed. For measurement purposes, one drink means one 12 oz. beer, one 4 oz. glass of wine, or a one-ounce shot of alcohol. Mixed drinks vary in their potency. Make sure you know exactly how much alcohol is in there, and request that it be mixed with non-carbonated beverages. Things like soda move the alcohol through the bloodstream quicker—making you feel drunk faster.

5. **Pace yourself.**
   The body can only process about one drink in an hour. This is approximately ½ to ¾ an ounce of pure alcohol. Overloading the body can lead to feeling hung-over, blacking out, or worse. Try slowing down and alternate between a drink and a glass of water. It may result in more trips to the restroom, but you will feel a lot better between a drink and a glass of water. It may result in blacking out, or worse. Try slowing down and alternate.

6. **Never mix.**
   It is never a good idea to mix alcohol with other substances, including prescription drugs. If you are taking medication for a condition—even a cold—try skipping the alcohol.

7. **Keep your body and mind sharp.**
   When you drink, the alcohol hinders vitamins from being absorbed properly. It also acts as a diuretic, expelling liquids, minerals, and electrolytes from the body. And don’t forget all the empty calories that go into each drink. Plus, heavy or frequent drinking can cause problems with academics, too. More inspiration to moderate!

8. **Sex and alcohol.**
   Sure, it might be easier to strike up a conversation with someone across the room, but keep in mind that alcohol impairs judgment—not something you want associated with sexual intimacy. Remember that consent cannot be legally given when the person is intoxicated. That means that it’s best to sober up before deciding about having sex.

9. **Re-focus the event.**
   If you’re hosting a party, what is there for people to do? Making an event just about drinking is not only potentially dangerous, it gets old fast. If you find yourself or others drinking to get drunk, it might be worth examining other aspects of life. It could indicate some kind of deeper issue. Stress and anxiety are common in college and there are constructive ways to deal with it. There is help available. (See the back of this pamphlet for contact information.)

10. **Consider your future.**
    Excessive drinking can cause major disruptions in your most important job right now: school. It’s not uncommon for drinking to lead to sliding grades, academic probation, even suspension or expulsion.

Most employers now perform a background check on potential employees. This means that they will be able to see alcohol or drug-related convictions on your record. That includes impaired driving, using a fake ID, serving underage students, and disorderly conduct. Speaking of sticking with you, also watch what gets posted on the Internet. Pages, photos, and text are stored for years to come. How would you explain some of those “crazy nights” to an employer or grad school board?

### Blood Alcohol Levels

A person’s blood alcohol level (or content, BAC, for short) depends on several factors, including rate of drinking, body mass, stomach contents, and the substance mixed with the alcohol. When a person’s BAC reaches high levels, there are numerous dangers, including blacking out, passing out, alcohol poisoning, and losing respiratory functions.

**Remember: The legal limit for BAC is .08.**
In Missouri, if you are under 21, you can be cited for a BAC as low as .02. Calculate your BAC level ahead of time and stick to a plan for keeping it at a safe level.

The charts below will give you an idea of what your BAC is like after three hours. Remember, these are for educational purposes and should not be interpreted as exact representations of actual BAC levels.

#### For Men:
